

Sub 324  
C1  
concl

digital signal is substantially equal to  $F_s/n_s$ , and that each frame comprises at least a first frame portion including synchronizing information.

<sup>27</sup>33. A receiver as claimed in claim <sup>36</sup>32, characterized in that said transmission medium is a record carrier, and that said receiver is formed as a device for reading said second digital signal from a track on said record carrier.

REMARKS

In response to the rejection of certain claims for indefiniteness, they have been cancelled and claims 30-33 substituted for claims 18, 19, 21 and 22 respectively.

Each of the substituted independent claims has a clear relationship to the system claimed in claim 29, contains what are believed to be the critical limitations on which patentability of the allowed system claim was based, and is therefore believed allowable for the same reason.

Early favorable action on the merits of the application is respectfully requested.

Respectfully submitted,

*David R. Treacy*
